

## **CEN F-450 Ultimate Traction Bar Kit**

If you need further assistance with this kit installation, please check out our install guide on Youtube by searching:

NEW QCRC ULTIMATE CEN Ford F-450 Product!

### **For this installation you will need:**

- 2.0mm Hex Driver
- 2.5mm Hex Driver

While these parts are strong together as one, they can be weak by themselves. Please use caution when tightening down the parts, as you can easily overtighten and damage the parts. There should be no required force to assemble, if you have to use force something is not properly aligned. Check your driveshafts on the outdrives.

Use caution as the driveshafts will most likely fall out from each axle so ensure they are properly installed in place before mounting the last traction bars.

There are two different ways to install this kit. Below is the recommended way to install. By removing the factory 3rd link from the front and rear of the truck. While this is not required it is highly recommended as if you keep the 3rd link you will have to extend those arms with spacers and new ends. We do not include the parts to extend the 3rd link as we find the kit to work better without. Depending on the shocks you use while lifting your truck. You may need to lengthen the center frame to axle mount as well.

This is not a lift kit for your CEN F-450, this is a set of traction bars meant to help increase your truck's stability. You will need to lift your truck prior to installing these traction bars.

## **Installation**

1. Begin by removing the two 2.0mm screws holding the four factory traction bars to the axles and frame.
2. Now remove the factory 3 link bars and 3 link bar mounts from each axle.
3. Begin installation of the traction bars by recognizing top and bottom. Top will have a slant promoting the bar to point upwards once installed onto the axle.
4. Install the Traction Bar by using the two factory 2.0mm screws to connect the two mounting holes on the traction bar to the axle.
5. For the final mounting point on the traction bar to frame mount take one of the supplied 2.5mm screws and connect it to the frame mount.

Congratulations installation is now complete and you can begin to enjoy whatever you enjoy doing with your strong lifted CEN F-450!

Be sure to check out all the other parts we offer on our website!
